

pdfmake (since it's based on pdfkit) supports JPEG and PNG format
If no width/height/fit is provided, image original size will be used

If you specify width, image will scale proportionally

If you specify both width and height - image will be stretched

You can also fit the image inside a rectangle

Images can be also provided in dataURL format...

or be declared in an "images" dictionary and referenced by name

and opacity is supported:
